FROM G D Guinn Field Operations Management Bldg 080 X8661 *4*

SUBJECT SW 59 SEEP WATER SUMMARY OF NEEDED ACTIONS REQUIRED PRIOR TO  
SENDING THE STREAM TO THE WASTE WATER TREATMENT UNIT GDG-001 95

DOE Order 5820 2A

Action Close MCB #106

In the meetings of the week of January 13 1995 it was determined by Operable Unit 2 (OU 2) personnel per conversations with Jeffrey Bray that their primary option for treatment of SW 59 would be through the proposed site wide Waste Water Treatment Unit (WWTU) in Building 891 This decision did not defer their interest in identifying the requirements for treatment of this stream by the Sanitary Treatment Plant (STP) so a meeting was conducted on January 13 1995 with representatives of Surface Water and Sanitary Waste Operations The following is a list of concerns identified that need to be addressed prior to sending this stream to the STP

- 1 Resource Conservation and Recovery Act (RCRA) Permitting and Compliance will evaluate this stream for correct utilization of the headworks exemption found in 6 CCR 1007 3 section 261 3(a)(2)(iv)(A) and (B)
- 2 If approved Field Operations Management will write a letter to the state to solicit their agreement that this exemption will apply and create no new hazardous waste streams
- 3 Environmental Restoration OU 2 will verify compliance with the exemption by completing the required sampling calculation/evaluations and documentation This includes documentation of the characterization of the streams sent to the STP and the storage of that data

The interest of OU 2 in following up on this action may provide a backup treatment possibility for SW 59 stream and will identify what actions will be needed to treat any similar streams by this method
